

## Cisco ASA 5500 Series Overview

The Cisco® ASA 5500 Series Adaptive Security Appliance is a modular platform that provides the next generation of security and VPN services for environments ranging from small offices/home offices and small and medium-sized businesses to large enterprises. The Cisco ASA 5500 Series offers enterprises a comprehensive portfolio of services that are customized through product editions tailored for firewall, intrusion prevention (IPS), content security, and VPN.

These editions enable superior protection by providing the right services for the right location. Each edition combines a focused set of Cisco ASA services to meet the needs of specific environments within the enterprise network. By meeting the security needs of each location, the overall network security posture is raised.

The Cisco ASA 5500 Series enables standardization on a single platform to reduce the overall operational cost of security. A common environment for configuration simplifies management and reduces training costs for staff, while the common hardware platform of the series reduces sparing costs.

Each edition addresses specific enterprise environment needs:

- **Firewall Edition:** Enables businesses to securely and reliably deploy mission-critical applications and networks. A unique, modular design provides significant investment protection and lower operational costs.
- **IPS Edition:** Protects business-critical servers and infrastructure from worms, hackers, and other threats through a combination of firewall, application security, and intrusion prevention services.

- **Content Security Edition:** Protects users at small or remote sites with a comprehensive package of security services. Enterprise-grade firewall and VPN services provide secure connectivity back to the corporate headend. Industry-leading content security services from Trend Micro protect the client system from malicious Websites and content-based threats such as viruses, spyware, and phishing.
- **SSL/IPsec VPN Edition:** Enables secure, remote user access to internal network systems and services, and supports VPN clustering for larger enterprise deployments. Secure Sockets Layer (SSL) and IP Security (IPsec) VPN remote-access technologies combine with threat mitigation technologies such as Cisco Secure Desktop, and with firewall and intrusion prevention services to ensure VPN traffic does not introduce threats to the enterprise.

## Market-Leading Application Security

## Threat-Protected SSL and IPsec VPN Services

## Industry-Leading IPS/Content Security Services

## Top 5 Reasons to Purchase Cisco ASA 5500 Series Adaptive Security Appliances

### 1. Trusted Firewall and Threat-Protected VPN Technology

Built upon trusted Cisco PIX® Security Appliance and Cisco VPN 3000 Series Concentrator technology. The Cisco ASA 5500 Series is the first solution to offer SSL and IPsec VPN services protected by market-leading firewall technology.

### 2. Industry-Leading Content Security Services

Combines Trend Micro's expertise in threat protection and content control at the Internet edge with proven Cisco solutions providing comprehensive antivirus, anti-spyware, file blocking, anti-spam, anti-phishing, URL blocking and filtering, and content filtering.

### 3. Advanced Intrusion Prevention Services

Provides proactive, full-featured intrusion prevention services to stop a wide range of threats, including worms, application-layer attacks, operating-system-level attacks, rootkits, spyware, peer-to-peer file sharing, and instant messaging.

### 4. Rich Management and Monitoring Services

Delivers intuitive single-device management and monitoring services through the Cisco Adaptive Security Device Manager (ASDM), and enterprise-class multidevice management services through Cisco Security Management Suite.

### 5. Reduced Deployment and Operations Costs

By providing a design and interface consistent with existing Cisco security solutions, the Cisco ASA 5500 Series enables significantly lower ownership costs for both initial security deployment and day-to-day management.
